DESCRIPTION

CD5 McAb recognizes a 67 KD type I single-chain transmembrane glycoprotein. CD5 antigen appears early in thymocyte development and is expressed on all mature T lymphocytes as well as on a small subset of peripheral B lymphocytes and also on most Ig⁺ B-chronic lymphoblastic leukemia (B-CLL). CD5 is a ligand for the CD72 antigen expressed on B lymphocytes and is involved in T cell signaling, activating, proliferating and interacting between T and B cells.

PREPARATION

The monoclonal antibody is purified from ascites by protein G affinity chromatography.

USAGE

The purified reagent is effective for indirect immunofluorescence staining of human cells for flow cytometric analysis.

STORAGE

Store at 4°C. For long-term storage aliquot and store at -20°C. Avoid freeze and thaw cycles.
